Rich,

This is right up your alley of questions that we probably should be addressing in your "report" . I didn't edit Trish's responses...but I would expect you would have other answers. Could you prepare the first draft, based upon your information gathered so far?

thanks.

p.s. still working on site. will give you a call on my way home tonight.

I started drafting a response to Mr. Revello's questions below. Please take a look and if you can, help me fill in some of the blanks. Once you take a look at it, I'll send it to Helen for "team" consideration.

Thx.

Subject: Dimmock Report

Good Morning Roy:

I've been reading the latest on EPA's findings regarding contamination of wells in Dimmock. Although EPA says the levels of contamination are safe, please provide responses to these questions:

1. Were the levels of arsenic, sodium, methane, chromium and bacteria higher in the wells tested than wells in similar geological formations in that area?

**Ex. 5 - Deliberative**

2. Were any of the above contaminants attributable to hydrofracking?

## **Ex. 5 - Deliberative**

3. Was the methane thermogenic or biogenic, or both?

**Ex. 5 - Deliberative**

4. Are there any studies showing how the interactions between arsenic, chromium and other contaminants might, together, affect human health.

## **Ex. 5 - Deliberative**

Thank you so much.

Felix Revello
